

— AI CONSULTING AND INTEGRATION IN OMAHA

Plan where AI fits your business

AI employees can take follow-ups, scheduling and data entry off your staff and give them time back. **We help you plan where AI fits**, get Microsoft 365 ready for Copilot, and give your team clear rules for using AI.

- Serving Omaha businesses since 2009.
- You own the AI account.

✓ You approve anything that goes out, gets paid, or gets deleted.

— WHAT WE HELP WITH

AI consulting and integration services

Copilot readiness and the AI use policy are fixed-price projects, quoted after a short call. If you do not need either one, we will tell you.

CONSULTING

AI consulting

We sit down with you, look at the repetitive work that fills your team's day, and help you decide where AI fits and who should approve what.

FIXED-PRICE PROJECT

Microsoft Copilot readiness

Before Copilot starts searching your files, we clean up who can open what in SharePoint, OneDrive and Teams, so it does not surface files people should not see. Then we train a small pilot group.

FIXED-PRICE PROJECT

AI use policy

Your employees get clear rules for using AI with company information. You get a plain-English AI use policy and a one-page staff summary. Your attorney can review the policy before you put it into use.

INTEGRATION PLANNING

Fitting AI into your tools

When AI employees are part of the plan, we connect them to the email, calendar and tools you already use, set who approves which actions, and set a spending cap before anything goes live.

— HOW WE WORK

How we plan and integrate AI

1

Assess your needs

We look at the jobs that take up the most of your team's day, how files are shared in Microsoft 365, and who should approve what.

2

Plan the integration

We recommend where AI fits, whether that means AI employees, Copilot readiness, an AI use policy or a mix, and we quote any fixed-price project after a short call.

3

Put the plan into place

We clean up file access, write the policy, or connect AI employees with approval rules and a spending cap, and then we show your team how it all works.

— YOUR BUSINESS STAYS IN CHARGE

Control and ownership

Whatever the plan includes, your team keeps the final say and your company keeps the account.

You stay in control

You approve anything that goes out, gets paid, or gets deleted, and that rule is written into our agreement.

You own the account

Your company opens the AI account and invites Cambium as an admin. You control access and billing, and we do not resell AI software.

We use them ourselves

We use AI employees in our own office, so we can show you how they fit into real business workflows.

Questions we hear a lot

Do you help with Microsoft Copilot?

Yes. Our Copilot readiness project cleans up who can see what in your files before Copilot starts searching them, then trains a small pilot group.

We already have an IT person. Does this step on their toes?

No. AI employees sit beside your current IT, and we are happy to work with whoever you have now.

We are a dental or medical office. Can we use this?

Yes. It starts with non-patient office work, like reviews, hiring and vendor follow-up. For the rest of your IT, we help put the technical safeguards HIPAA calls for in place and keep them maintained, alongside your compliance advisor.

What does this mean for my team?

AI employees take routine work off your team, like sorting, summaries, first drafts and reminders. Your people approve the work and keep making the decisions.

Is there a long contract?

No. Service for AI employees is month to month, and either of us can cancel with 30 days' notice. Copilot readiness and the AI use policy are fixed-price projects.

Can it send an email or pay a bill on its own?

Not without your approval. Nothing is sent, paid, or deleted until someone on your team signs off, and that rule is written into our agreement.

Why Cambium

In Omaha since 2009

We are a local company at 6542 S 118th St, serving the Omaha metro, and we are happy to meet in person.

Navy veteran-owned

Cambium Data is Navy veteran-owned. Owner Tony Underwood has over three decades of experience in IT.

The IT underneath

We also run managed IT, networking and cybersecurity, so the accounts AI works in are looked after too.

Straight answers

If you do not need a Copilot project or an AI use policy, we will tell you.
