

— BUSINESS INTERNET IN OMAHA

Business internet and fiber

Fiber and business internet for your office, plus a backup line when a second connection makes sense. **We handle the quote, the order and the install date, then set up your firewall and network.**

- Cambium Data is Navy veteran-owned. Serving Omaha businesses since 2009.
- Owner Tony Underwood has over three decades of experience in IT.

— WHAT COMES OFF YOUR PLATE

What we handle

You tell us what the office needs, and we coordinate the rest with the carrier.

Fiber and business internet

We help you pick internet service based on how your people actually work, from email and video calls to phones and cloud software.

A backup internet line

A second line can take over when the main one goes down, which helps keep your office connected.

Quotes and ordering

We get quotes through carrier partner Great Plains Communications, explain the options in plain English, and place the order.

Install coordination

We work out the install date with the carrier and keep track of it, so you are not chasing anyone.

Firewall and network setup

Once the line is in, we set up the firewall and network on our end so everything works on day one.

When the line goes down

For managed IT clients, we deal with the carrier and chase the ticket, so you are not stuck on hold.

One internet line or a backup line

When your only internet line drops, email, phones and anything in the cloud can go with it. A backup line can take over when the main one fails. Not every office needs one, and we will tell you honestly whether it is worth it for how you work.

— TWO WAYS TO WORK WITH US

Managed IT clients and project-only clients

MANAGED IT CLIENTS

Part of your managed IT

If we already look after your IT, we handle the internet line along with everything else, including the quote, the order, the firewall and the calls to the carrier.

NO CONTRACT NEEDED

Internet as a one-time project

You do not need a managed IT contract to hire us for a project or buy hardware. We quote and order the line, coordinate the install, and set up the firewall and network as a project.

— HOW WE WORK

How getting new internet works

From the first call to the day the line is live.

- 1**
Talk it through
We talk about how many people you have, what runs over the internet, and whether you need a backup line.
- 2**
Quotes
We get quotes through Great Plains Communications and walk you through the options.
- 3**
Order
You pick, and we place the order with the carrier.
- 4**
Install date
We work out the install date with the carrier and keep things moving.
- 5**
Firewall and network
We set up the firewall and network on our end and test everything.
- 6**
After it is live
Ongoing support comes with managed IT. Otherwise, later changes are quoted as a project.

Your internet line carries everything else

Phones, cloud software, Microsoft 365 and AI tools all depend on a solid internet line, and security starts at the firewall where the line comes in. We also handle business phone systems, network support and cybersecurity.

Questions we hear

Are you an internet provider?

No. We do not own internet lines, and we are not one of the Omaha internet providers. We quote, order and coordinate your service with the carrier, then set up your firewall and network.

What speed and price can we get?

That depends on your address and what is available there. We will get real quotes for your office and explain them in plain English.

Do we need a backup line?

Not every office does. If your team cannot work when the internet is down, it is worth a look, and we will talk it through with you.

Which carriers do you work with?

We quote business internet through carrier partners like Great Plains Communications. What is available depends on your building, and we will tell you what the real options are.

Do we need a managed IT contract?

No. Internet can be a one-time project, and you do not need a managed IT contract to hire us.

Can you help when we move offices?

Yes. Internet is part of our office move and buildout projects, along with the network and phones, and we plan and deliver cabling projects.

Why Cambium

One local team

One Omaha team handles your IT, network, phones, internet, cameras, security and AI.

No contract needed

You do not need a managed IT contract to hire us for a project or buy hardware.

Posted pricing

Our managed IT pricing is posted right on our site.
