

BUSINESS PHONE SYSTEMS IN OMAHA

Business phone systems

Cloud-based phone systems, set up the way your office actually answers the phone. **You keep your numbers, and the same local team looks after the network underneath.**

- Cambium Data is Navy veteran-owned. Serving Omaha businesses since 2009.
- Owner Tony Underwood has over three decades of experience in IT.

WHAT COMES OFF YOUR PLATE

What we set up

A cloud-based business phone system, or VoIP, set up so your staff is not fighting the phones all day.

Desk phones and phone apps

We set up desk phones for the office and apps so staff can make and take work calls on their cell phones or laptops.

Call routing

We decide with you who rings first, what callers hear, and where calls go after hours.

Voicemail to email

Each person and the main line get voicemail, with messages sent to email if you want them.

Keeping your numbers

We move, or port, your existing numbers to the new system, so customers keep calling the same numbers.

Training

We walk your staff through the new phones, so the first day is not a scramble.

When the internet drops

Calls can be set up to go to cell phones or voicemail if the office internet goes down.

THREE KINDS OF PHONE PROJECTS

We can help with any of these

NEW OFFICE OR NEW SYSTEM

A new phone system

Opening a new office, or your current system just is not working? We help you pick a system that fits how you work, set it up, and train your team.

OLD SYSTEM IN THE CLOSET

Moving off an old system

Still running an old phone system or old phone lines? We plan the move, bring your numbers over, and schedule the switch at a time that fits your business.

NO CONTRACT NEEDED

A one-time install

We quote the phone project, install it and hand it over. Ongoing support comes with managed IT, and later changes can be quoted as a small project.

Phones depend on your network

Choppy calls can be a network or internet problem, not a phone problem. Because we also do network support, we check your network and internet connection before the phones go in, and we fix what would get in the way.

— HOW WE WORK

How a phone project works

- 1 Walkthrough**
We learn how many people you have, how calls come in today, and what is not working.
- 2 Plan and quote**
You get the system, the phones, the call flow and the cost in plain English.
- 3 Number move**
We handle the paperwork to bring your existing numbers over.
- 4 Install and training**
We set up the phones and call routing, then walk your staff through it.
- 5 Support after**
Ongoing support comes with managed IT. Otherwise, later changes are quoted as a small project.

Phones, network and internet from one team

When the phones act up, you should not have to referee between the phone company, the internet provider and your IT person. With us, you have one local team to call.

Questions we hear

Can we keep our phone numbers?

Yes. We move your existing numbers to the new system.

Do we need a managed IT contract?

No. A phone system can be a one-time project, and you do not need a managed IT contract to hire us.

Which phone system do you recommend?

We recommend a system after we learn how your office uses the phone, and we explain the options and why we picked one.

Can you help when we move offices?

Yes. Phones are part of our office move and buildout projects.

Why Cambium

One local team

One Omaha team handles your IT, network, phones, internet, cameras, security and AI.

No contract needed

You do not need a managed IT contract to hire us for a project or buy hardware.

Posted pricing

Our managed IT pricing is posted right on our site.

Local since 2009

Serving Omaha businesses since 2009. Owner Tony Underwood has over three decades of experience in IT.

Not sure where to start?

Start with a free technology and AI review. We look at your setup, show you what is not protected and what we would fix first, and you keep the written summary. If you already know you need new phones, call us for a quote.
