

CLOUD AND MICROSOFT 365 SERVICES IN OMAHA

Cloud, Azure and Microsoft 365

New hires, departures and licensing get handled so nothing slips. **We run the Microsoft 365 your office works in every day**, and we can move aging servers to Azure or give your staff a virtual desktop.

- Cambium Data is Navy veteran-owned. Serving Omaha businesses since 2009.
- Owner Tony Underwood has over three decades of experience in IT.

WHAT COMES OFF YOUR PLATE

Microsoft 365, kept tidy

This is the day-to-day admin that keeps Microsoft 365 working for everyone, and safe when people come and go.

New hires and departures

Accounts, mailboxes and licenses are set up before a new person starts and shut off the day someone leaves.

Licensing

The licenses you pay for are matched to the people who use them, and we add and remove them as your team changes.

Teams and SharePoint

We set up Teams and SharePoint so files live in one place and the right people can open them.

Email security

Email filtering, multi-factor sign-in and admin accounts are configured with security in mind.

Messy tenant cleanup

If your Microsoft 365 has grown messy over the years, we clean up old accounts, sharing links and permissions.

Copilot readiness

Before Microsoft Copilot goes in, we check who can see what in your files, so it does not surface files people should not see.

FILE SERVERS AND SHARED DRIVES

Moving files to SharePoint and Teams

Still running a file server, or a shared drive everyone maps a letter to? We move those files into SharePoint and Teams, so staff can find them from the office, from home or on a phone.

- ✓ We map out the folders and who needs access before anything moves.
- ✓ Permissions are set by team, so the right people see the right files.
- ✓ Version history lets you roll back an overwritten file.
- ✓ We move the files after hours and check them with your staff afterward.

Cloud sync is not a backup

OneDrive, SharePoint and Teams copy every change to every device, including a deleted folder or files encrypted by ransomware. Microsoft keeps deleted items for a limited time, which is not the same as a backup you control.

We back up Microsoft 365 email and files separately, and we test those backups by restoring them.

- ✓ **Why Cambium:** one local Omaha team handles Microsoft 365, Azure and the IT underneath them, and you can hire us for a project or hardware without a managed IT contract. Serving Omaha businesses since 2009. Owner Tony Underwood has over three decades of experience in IT.

MICROSOFT AZURE

Move your servers, or run hybrid

When an on-site server is due for replacement, buying a new one is not the only option. We can move the server to Microsoft Azure, or set up a hybrid where some servers move to Azure and others stay in the office.

- ✓ We look at what each server does, then compare a new host, Azure or a hybrid, with the monthly cost in writing.
- ✓ We plan the move around your business hours and test with your staff before the old server is retired.
- ✓ After the move, we manage the servers in Azure along with the rest of your IT.

Hosting and virtual desktops on Azure, with Entra ID sign-in

Server and application hosting

We host your servers and line-of-business applications on Azure, so there is less hardware in the office to maintain. Entra ID controls who can reach each one, with multi-factor authentication turned on.

Azure Virtual Desktop

Staff get a Windows desktop on Azure and sign in with Entra ID from anywhere. Files and applications stay in Azure instead of on the device, which helps when a laptop is lost.

Virtualization: VMware and Hyper-V

Some offices run their servers as virtual machines on one or two hosts. We set up, upgrade and manage VMware and Hyper-V.

- ✓ We install new hosts and move the virtual machines over and test them.
- ✓ We plan version upgrades around your business hours.
- ✓ We handle patching, capacity checks and backups of the virtual machines.
- ✓ We move virtual servers to Azure when that makes more sense than a new host.

Hardware as a service

You can get the PCs, servers and network gear your office needs for a monthly cost instead of a large purchase up front. We set the equipment up and manage it with the rest of your IT, so there is one team to call when something breaks.

We put the equipment list and the monthly number in writing before you sign.

HOW WE WORK

Getting started

1

We learn your setup

We look at your Microsoft 365, servers and files, and we write down what we find. You keep it either way.

2

A written plan

We lay out what we would clean up or move, in what order, and what it costs.

3

We do the work

We make the changes or the move, test with your staff, and document the setup.

See what we would fix first

Start with a free technology and AI review. We look at your Microsoft 365 setup and any servers due for replacement, and we show you what is not protected and what we would fix first. It is free, and you keep the written summary.
