

CYBERSECURITY FOR OMAHA BUSINESSES

Comprehensive security

We put comprehensive security in place, keep it running, and explain it in plain English. **You stop wondering whether the updates ran or the backups work.**

- Cambium Data is Navy veteran-owned. Serving Omaha businesses since 2009.
- Owner Tony Underwood has over three decades of experience in IT.

WHAT COMES OFF YOUR PLATE

The comprehensive security we put in place

Security problems can start with something simple, like a stolen password or a computer that missed its updates. Good security leaves no easy way in.

Endpoint protection

Your PCs and servers get protection, and a person looks at the alerts instead of leaving the software to run on its own.

Email security

Filtering helps reduce spam and phishing, and your email settings make it harder for someone to pretend to be you.

Multi-factor sign-in

A second sign-in step, like a prompt on your phone, makes a stolen password much less useful by itself.

Patching

Updates for Windows and your other software are installed on a schedule, so known holes get closed.

Backup and recovery

We test backups by restoring them, so you have a better chance of getting your files back if something does get through.

Microsoft 365 security

We review and configure sign-in settings, admin accounts and file sharing in Microsoft 365 with security in mind.

ONGOING

Security that stays in place

People join and leave, software gets added, and old accounts get forgotten. We keep checking, so you know where things stand.

- ✓ A person looks at the alerts from endpoint protection.
- ✓ Updates are installed on a schedule.
- ✓ Backups are tested by restoring them.
- ✓ Admin accounts and old user accounts are reviewed.

Firewalls and the network underneath

An old firewall that no longer gets updates is a real risk. We set up and replace firewalls, including Cisco and Meraki, as part of our network support. If you only need a firewall or server replaced, you can hire us for that project without a managed IT contract.

- ✓ Have an IT person already? We can take on the security pieces they do not have time for and write down who owns what. For medical and dental offices, we help put the technical safeguards HIPAA calls for in place, alongside your compliance advisor.

CYBER INSURANCE READINESS

Get ready for cyber insurance requirements

Answer the questionnaire

Cyber insurance applications and renewals come with a security questionnaire. We help you answer it accurately, in plain English, so you know what you are signing.

Close the common gaps

Insurers commonly ask about multi-factor sign-in, backups, endpoint protection, email security and patching. We help put those in place or tighten them up, and we write down what is done.

We do not sell insurance, and we cannot promise coverage or a lower premium. That decision belongs to your insurer.

Security assessments and automated penetration testing

When your insurer, a client contract or compliance rules ask for a penetration test, we run automated external and internal tests against your network. The test looks for weaknesses an attacker could use and tests them within the approved scope. You get a plain-English report and a plan for fixes, and the test only runs with your written sign-off.

HOW WE WORK

Getting started

1

Free review

We look at your setup and show you what is not protected. You keep the written summary either way.

2

A written plan

We lay out what we would fix, in what order, and who does what.

3

Put it in place

We set up the protection, sign-in settings and backups, and document what we did.

4

Keep it maintained

We watch the alerts, patch on a schedule, test backups and review accounts.

Why Cambium

One local team

One Omaha team handles your IT, network, phones, internet, cameras, security and AI.

Part of managed IT

Security can be part of our managed IT, so it is not a separate project you have to remember.

No contract needed

You do not need a managed IT contract to hire us for a project or buy hardware.

Local since 2009

Serving Omaha businesses since 2009. Owner Tony Underwood has over three decades of experience in IT.

Find out what is not protected

Start with a free technology and AI review. We look at your setup, show you what is not protected and where AI employees could help, and you keep the written summary. There is no obligation.
