

— OMAHA IT SUPPORT AND MANAGED SERVICES

One Omaha team for your IT, network, phones and security

We have supported Omaha businesses since 2009. We explain things plainly, and we do what we say.

- We are Navy veteran-owned.
- We serve businesses across the Omaha metro.

What we do We handle all of it locally.

Managed IT and co-managed IT

We become your IT department, or we back up the IT person you already have.

Microsoft 365 and Microsoft Azure

We keep Microsoft 365 organized and secure, and we set up hosting and virtual desktops on Azure and Entra.

Business phones and internet

We provide and support cloud-based phones, business internet and backup lines.

Backup and disaster recovery

We test backups by restoring them, not just by checking that a backup job ran.

Hardware as a service and Dell hardware

You can buy Dell hardware through us, or get PCs, servers and network gear for a monthly cost.

Comprehensive cybersecurity

We manage firewalls, multi-factor sign-in, endpoint protection and phishing training.

Networking, Cisco and Meraki

As a Cisco Premier Partner, we sell and support Cisco and Meraki firewalls, switches and Wi-Fi.

Security cameras

We set up and support security cameras for your office, managed right alongside your network.

IT projects

We plan and deliver VMware and Hyper-V virtualization, upgrades, office moves and cabling projects.

AI employees

AI employees take repetitive office work off your staff, so they get more done in less time.

Why Cambium

Local Omaha team since 2009

You work with local people who know your setup.

Navy veteran-owned

Owner Tony Underwood has over three decades of experience in IT.

One team for all of it

Your IT, network, phones, security and AI employees all come from one local company.

Projects welcome

You do not need a managed IT contract to hire us for a project or to buy hardware.

Start with a free technology and AI review

Book a short call with us, and we handle the rest once it is scheduled. We will show you what is not protected and which repetitive office work AI employees could take off your staff's plate.
