

IT INFRASTRUCTURE PROJECTS IN OMAHA

IT infrastructure projects

Network refreshes, office moves, Wi-Fi upgrades, server or firewall replacements, virtualization and cabling, done as one project. **We scope it, quote it, do it and hand you the documentation.**

- Cambium Data is Navy veteran-owned. Serving Omaha businesses since 2009.
- Owner Tony Underwood has over three decades of experience in IT.

PROJECTS WE TAKE ON

One-time work for your office

For managed IT clients and for companies that only need a project.

Network refreshes

We replace aging switches, firewalls and Wi-Fi before they become a problem, and we plan the work to reduce disruption to your office.

Office moves and buildouts

We plan the network, phones and cabling for a new or relocated office, and we move everything over.

Wi-Fi upgrades

We improve coverage, set up a separate guest network and fix dead spots.

Cabling projects

We plan and deliver cabling projects, including the cable runs, the install, and connecting and testing the equipment.

Server and firewall replacements

We replace old servers and firewalls, move your data and settings over, and test before the old gear goes away.

Internet, phones and Cisco

We quote and set up business internet and backup lines, install phone systems, and handle Cisco and Meraki hardware, licensing and setup.

Virtualization with VMware and Hyper-V

Some offices run their servers as virtual machines on one or two hosts. We set up, upgrade and manage VMware and Hyper-V, and we move virtual servers to Microsoft Azure when that makes more sense than buying a new host.

- ✓ We install new VMware or Hyper-V hosts, then move the virtual machines over and test them.
- ✓ We move you to newer versions of VMware or Hyper-V, planned around your business hours.
- ✓ We handle patching, capacity checks and backups of the virtual machines.
- ✓ We move virtual servers to Azure, or set up a hybrid with some servers kept on-site.
- ✓ Managed IT clients get their virtualized servers managed as part of managed IT.

One team for the whole project

Network, Cisco gear, phones, business internet, Wi-Fi and cabling can all be one project, with one local team answering for it instead of five vendors.

HOW WE WORK

How a project works

No long sales process.

- 1 Walkthrough**
We look at the space, the equipment and what you need the project to do.
- 2 Written scope and quote**
You get what we will do, what it costs and what it does not include, in writing.
- 3 Schedule**
We plan the work around your business to help minimize downtime.
- 4 Do the work**
We install, move or replace equipment and test as we go.
- 5 Test and document**
We test the work and document the setup.
- 6 Handoff**
We walk you or your IT person through it and hand over the documentation.

A project is a project

You do not need a managed IT contract to hire us for a project or buy hardware. We scope the work, quote it per project, do it, and hand you the documentation. If you want ongoing support afterward, that comes with managed IT, and it is your call.

Hardware as a service

Prefer a monthly cost over buying equipment outright? Hardware as a service covers PCs, servers and network gear.

Questions we hear

Do we need a managed IT contract?

No. You do not need a managed IT contract to hire us for a project or buy hardware.

Can the work happen after hours?

Yes. After-hours work is available and spelled out in the quote.

Can you handle an office move?

Yes. We plan the network, phones and cabling for the new space and move everything over.

How is a project priced?

Project and engineering work is quoted per project, after a walkthrough. You see the price in writing before we start.

We have an IT person. Can you work with them?

Yes. We work alongside in-house IT and other vendors, and we write down who does what.

What do we get at the end?

You get a working setup, tested, and documentation of how it is set up.

Why Cambium

One local team

One Omaha team handles your IT, network, phones, internet, cameras, security and AI.

No contract needed

You do not need a managed IT contract to hire us for a project or buy hardware.

Posted pricing
